- View runtime and caching information using the built in Kentico CMS functionality
- Deploy a Kentico CMS website

When it comes to ensuring the success of a client implementation of Kentico CMS, best practices and proper development methodologies are critical. This three day instructor led Certified Developer Training focuses on providing comprehensive training designed to speed deployments, promote best practices and showcase Kentico CMS capabilities. The training will instruct Web developers on the introductory fundamentals and best practices for building, deploying and maintaining applications with Kentico CMS 5. Additionally, it focuses on using a Microsoft Visual 2008 development environment and the Microsoft .NET Framework 3.5 to create Kentico CMS applications using the Kentico API, web parts, and widgets to deliver dynamic content to a Web site.

Target Audience

This course is intended for web developers with little or no previous Kentico CMS experience. Attendees are assumed to have knowledge of Hypertext Markup Language (HTML) or Dynamic HTML (DHTML), along with programming experience using Microsoft Visual Basic or Microsoft Visual C#.

Goals

After successfully completing this course, trainees will be fully equipped to build a Kentico CMS based website, manage multi-site environments, configure load balanced and tiered deployment implementations, create/utilize custom web parts/modules and fully employ the Kentico CMS API.
