Web Design Magic: Product Descriptions

Microsoft Office SharePoint Server 2007 provides a single, integrated location where employees can efficiently collaborate with team members, find organizational resources, search for experts and corporate information, manage content and workflow, and leverage business insight to make better-informed decisions.

■ Collaboration and Social Computing

Allow teams to work together effectively, collaborate on and publish documents, maintain task lists, implement workflows, and share information through the use of wikis and blogs.

■ Portals

Create personal My Site portal to share information with others and personalize the user experience and content of an enterprise Web site based on the user's profile.

■ Business Process and Forms

Design business forms that are accessible directly in a Web browser and integrate with databases or other business applications.

■ Business Intelligence

Allow information workers to easily access critical business information, analyze and view data, and publish reports to make more informed decisions.

■ Enterprise Content Management

Create and manage documents, records, and Web content using workflow and information rights management.

Microsoft SharePoint allows teams to work together effectively, collaborate on and publish documents, maintain task lists, implement workflows, and share information through the use of wikis, blogs and forums.

Microsoft Office SharePoint Server 2007 is a new server program that is part of the 2007 Microsoft Office system. Your organization can use Office SharePoint Server 2007 to facilitate collaboration, provide content management features, implement business processes, and supply access to information that is essential to organisational goals and processes.

SharePoint sites can be quickly created that support specific content publishing, content management, records management, or business intelligence needs. You can also conduct effective searches for people, documents, and data, participate in forms-driven business processes, and access and analyze large amounts of business data.

Office SharePoint Server 2007 is designed to work effectively with other programs, servers, and technologies in the 2007 Office release.

SharePoint Customisations

SharePoint consists of different products that can be used in different combinations to satisfy a variety of business needs. Microsoft recognizes that not all businesses require the same application solutions and that sometimes there is a need for simplicity in design.

In addition, SharePoint leverages the functionality provided by other products in the Microsoft lineup in order to provide a complete business solution.

Table 1 describes the more recent Microsoft products and how they can be used in a SharePoint implementation.

Every setup requires different settings and we will understand your needs precisely and provide the best possible customisation solutions that will catapult the end result.

- User Interface Design (UI)
- Custom workflows
- Intranet/Extranet web sites
- Web Part Development
- InfoPath and Forms Services
- SharePoint Branding
- Process Automation
- Managed Solutions
- Support Agreements

Optional
SQL Server 2005/2008	Provides the backend database platform where configuration and user data is stored.	Required

Table 1 - SharePoint Products

In Summary

SharePoint is a tool that promises overall increase in productivity and efficiency. But to exploit its full potential, one needs to look beyond the basic installation. With years of expertise and in-depth knowledge about the product behind us, we will guide you through its innumerable customization options to adapt to your organization's functionality. Every setup requires different settings and we will understand your needs precisely and provide the best possible customization solutions that will catapult the end result.

Thank you for recommending SharePoint as a tool to manage my team and overall daily operations to my business. Since using SharePoint everything has now fallen into place. The whole team managed to learn this very quickly which tells me this has been a natural progressive cause and effect. It would be impossible to continue on with our previous systems and SharePoint is evidence of this. You have truly helped us take a leap forward with this application.

Brett Fletcher, CEO, Diablo-Group
